(f) Provisions

Provisions are recognized if, and only if, the following criteria are simultaneously met:

- The Company has an ongoing obligation (legal or constructive) as a result of a past event.
- It is probable that an outflow of resources embodying economic benefits will be required to settle the obligation.
- The amount of the obligation can be reliably estimated; provisions are measured according to the risk assessment or the exposed charge, based upon best-known facts.

Demobilization provisions relate to estimated costs for demobilization of leased facilities at the end of the respective lease period or operating life.

Warranty provisions relate to the Company's obligations to replace or repair defective items that become apparent within an agreed period, starting from final acceptance of the delivered system. These assurance-type warranties are provided to customers on most Turnkey sales for a duration generally between 1 and 2 years. These provisions are estimated on a statistical basis regarding the Company's past experience or on an individual basis in the case of any warranty claim already identified. These provisions are classified as current by nature as they coincide with the production cycle of the Company.

Other provisions include provisions like commercial claims, regulatory fines related to operations and local content penalties. In relation to local content penalties, Brazilian oil and gas contracts typically include local content requirements. These requirements are issued by the Agência Nacional do Petróleo, Gás Natural e Biocombustíveis (ANP) to the winning concessionaire/consortia of auctioned Brazilian exploratory blocks or areas at the end of the bidding round, with the intention to strengthen the domestic Brazilian market and expand local employment. The owning concessionaire/consortia normally contractually passes such requirements on to, among other suppliers, the company delivering the FPSO. For the Company's Brazilian contracts, the Company assesses the execution strategy and may decide that execution of the project in locations other than Brazil is more beneficial. Such a decision takes into account factors such as optimization of overall cost of delivery, quality and timeliness. As a result, following the chosen execution strategy, the Company may expect not to meet entirely the agreed local content requirements. In such circumstances, the expected penalty to be paid, as a result of not meeting the local content requirements, is determined based on management's best estimate and recognized as provision during the construction period. The corresponding cost is expensed over the construction period of the asset.

(g) Property, plant and equipment

Property, plant and equipment are stated at cost, less accumulated depreciation and accumulated impairment losses. Historical cost includes expenditure that is directly attributable to the acquisition of such items. The capital value of a facility to be leased and operated for a client is the sum of external costs (such as shipyards, subcontractors and suppliers), internal costs (design, engineering, construction supervision, etc.), third-party financial costs including interest paid during construction and attributable overhead.

Subsequent costs are included in an asset's carrying amount or recognized as a separate asset, as appropriate, only when it is probable that future economic benefits associated with the item will flow to the Company and the cost of the item can be measured reliably. The costs of assets include the initial estimate of costs of demobilization of the asset, net of reimbursement expected to be received by the client.

Costs related to major overhaul, which meet the criteria for capitalization, are included in the asset's carrying amount. All other repairs and maintenance are charged to the income statement during the financial period in which they are incurred.

When significant parts of an item of property, plant and equipment have different useful lives, those components are accounted for as separate line items of property, plant and equipment. The depreciation charge is calculated, based on future anticipated economic benefits, e.g. based on the unit of production method or on a straight-line basis as follows:

- New build Fast4Ward® FPSO up to 30 years (included in vessels and floating equipment);
- Converted tankers FPSO 10-20 years (included in vessels and floating equipment);
- Floating equipment 3-15 years (included in vessels and floating equipment);
- Buildings 30-50 years;
- Other assets 2-20 years;
- Land is not depreciated.
